Chapter 5

CONCLUSION AND FUTURE ENHANCEMENTS

We have taken enough care to make our project more user friendly and interactive. We hope that the system should be useful to all the users. Looking back towards the experiences we have achieved during such phase makes us remember the curve that is seen through which we went during the development of our project.

Now when such system stands completed we place ourselves at a much higher place in the field of knowledge. As this is first real-time project for us. We had given our best for its development. As it is the first time undertaken by us it may take some mistakes but we come up as developers of the system, have done our best to provide an error free system to our users and hope the success of our system "Online Wedding Planning System".

In a nutshell,it can be summarized that the future scope of the project circles around maintaining information regarding:

- Integrate multiple load balancers to distribute the loads of the system.
- Create the master and slave database structure to reduce the overload of the database queries
- Implement the backup mechanism for taking backup of codebase and database on regular basis on different servers
- We will host the platform on online servers to make it accessible worldwide
